EDUCATION

- 🕒 **B.Tech. – Computer Science & Engineering**
Shri Ram Institute of Technology, Jabalpur | 2023 | CGPA: 8.71/10
- 🕒 Higher Secondary Certificate
State Board
(12th) | 2018-19 | 70%
- 🕒 Secondary School Certificate
State Board
(10th) | 2016-17 | 85%

KNOWLEDGE PURVIEW

- ➔ Data Science & Analytics
- ➔ Machine Learning
- ➔ Generative AI
- ➔ Computer Vision
- ➔ Natural Language Processing (NLP)
- ➔ Python Development
- ➔ Full-Stack Development
- ➔ Software Engineering Principles

TECHNICAL SKILLS

- ➔ Large Language Models (LLMs)
- ➔ LangChain
- ➔ Generative AI
- ➔ Retrieval-Augmented Generation (RAG)

SOFT SKILLS

- ➔ Analytical Problem-Solving
- ➔ Technical Curiosity
- ➔ Structured Debugging
- ➔ Independent Learning
- ➔ Solution-Oriented Thinking

CERTIFICATION

- ➔ SQL Certification – University of Michigan | 2023

JOB OBJECTIVE

To pursue opportunities in Software Engineering, Data Science, and AI/ML by applying knowledge of Python, Machine Learning, Generative AI, LLMs, Data Science, and Data Analytics to develop intelligent, scalable, and data-driven solutions. Eager to contribute to real-world projects, solve complex business challenges, and drive innovation through analytical thinking and emerging technologies.

PROFILE SUMMARY

- ➔ Computer Science graduate with a foundation in Software Engineering, Data Science, Machine Learning, Generative AI, LLMs, Python Development, and Data Analytics.
- ➔ Developed an AI-Powered Interview Proctoring System leveraging Python, OpenCV, MediaPipe, and Streamlit for real-time facial analysis and suspicious activity detection.
- ➔ Recipient of the Black Star Coder Award (2022) at GyanGanga College for contributions to a government-associated data management initiative.
- ➔ Skilled in Machine Learning, Generative AI, Prompt Engineering, Data Processing, Model Development, and AI Application Development.
- ➔ Strong in analytical problem-solving, structured debugging, and rapid learning, with hands-on experience in speech recognition and NLP-based applications.

PROJECTS

Ai Interview Proctoring System | May 2026 | [View Project](#)

- ➔ Developed an AI-powered interview proctoring application using Python, OpenCV, MediaPipe Face Mesh, and Streamlit to enable real-time candidate monitoring through facial and behavioral analysis.
- ➔ Implemented Face Detection, Facial Landmark Tracking, Gaze Estimation, Head-Pose Analysis, and Multiple-Face Detection to identify attention deviations and potentially suspicious activities during interview sessions.
- ➔ Engineered monitoring logic to detect additional faces appearing within the camera frame and assess candidate gaze and head movement during an interview.
- ➔ Optimized the application for low-latency processing, with practical capacity of approximately 50 concurrent users and near real-time feedback.
- ➔ Achieved approximately 95% accuracy in detection, with identified limitations primarily arising when multiple faces appeared within the same frame.

Voice Note Ai Application | October 2025 | [View Project](#)

- ➔ Built an AI-powered voice-note application that converts conversational speech into text, reducing the effort associated with manual note creation.
- ➔ Integrated Speech-to-Text APIs with a React.js, Node.js, and REST API architecture to enable voice-based note creation and seamless Front-end/Back-end interaction.
- ➔ Developed CRUD-based REST APIs for note creation, retrieval, updating, and deletion, with SQLite supporting persistent data storage.
- ➔ Resolved English syntax and accent-recognition challenges by integrating a Python-based accent-recognition module, improved the application's capability to interpret conversational speech.
- ➔ Enabled estimated time savings of 10–60 minutes compared with manual note-taking, depending on the duration of the conversation.

PERSONAL DETAILS

Date of Birth : 23rd May 2002

Languages Known : English & Hindi
